

The background of the slide features a series of parallel diagonal stripes in a lighter shade of blue, running from the top-left towards the bottom-right. The stripes are evenly spaced and cover the entire background.

**SECURITY FOR SOCIAL SECURITY:**

**IS PRE-FUNDING THE ANSWER?**

**Proposition 1: Social Security is not a large private sector pension. It is instead, a macroeconomic means of wealth transfer, whereby workers transfer wealth to the elderly through their social security contributions. This is true whether the plan is pre-funded or pay-as-you-go.**

$$C = \frac{\int_{65}^{\infty} e^{-\delta x} l_x dx}{\int_{20}^{65} e^{-\delta x} l_x dx}$$

where:  $\delta$  is the real rate of interest earned on the invested funds, after inflation (both before and after retirement)

and  $l_x$  is the probability of being alive at age  $x$ .

$$C = \frac{\int_{65}^{\infty} e^{-rx} L_x dx}{\int_{20}^{65} e^{-rx} L_x dx}$$

where:  $r$  is the rate of increase of national wages on which contribution are made

and  $L_x$  is the actual number of people in the system aged  $x$ .

$$C = \frac{\int_{65}^{\infty} e^{-\delta x} l_x dx}{\int_{20}^{65} e^{-\delta x} l_x dx}$$

$$C = \frac{\int_{65}^{\infty} e^{-rx} L_x dx}{\int_{20}^{65} e^{-rx} L_x dx}$$

**Proposition 2:** The contribution rate required for a fully-funded social security system is highly dependent on the real rates of return realized on invested assets. The contribution rate required for a pay-as-you-go social security system is highly dependent on the ratio of dependents to workers and the rate of increase in covered wages. The latter, in turn, is dependent on the growth rate of the labour force and the growth rate of worker productivity.

**Proposition 3: There is nothing inherent in the mechanisms of a fully-funded social security system to make it any more stable than a pay-as-you-go system.**

**Proposition 4: In a country with a corrupt government, the only thing riskier to the worker than a pay-as-you-go social security system is a funded social security system.**

**TABLE 1**  
**LIFE EXPECTANCY IN THE UNITED STATES**

<b>Year</b>	<b>At Birth</b>		<b>At Age 65</b>	
	<b>Male</b>	<b>Female</b>	<b>Male</b>	<b>Female</b>
1920	55.6	57.6	12.2	12.7
1960	66.8	73.2	12.9	15.8
1990	71.8	78.8	15.1	19.0
1998	73.4	79.4	15.7	19.2

**TABLE 2**  
**LIFE EXPECTANCY IN C ANADA**

<b>Year</b>	<b>At Birth</b>		<b>At Age 65</b>	
	<b>Male</b>	<b>Female</b>	<b>Male</b>	<b>Female</b>
1931	60.0	62.1	13.0	13.7
1951	66.3	70.8	13.3	15.0
1971	69.3	76.4	13.7	17.4
1991	74.6	80.9	15.7	19.9

## Changes in the Age Structure

# 1960s

Senior dependency ratio	0.33
Annual increase in real wages	2.0%
Real rates of return	2.0%

<b>Funding Arrangement</b>	<b>Projected Cost as Percentage of Payroll</b>
Pay-as-you-go (mature plan)	11.0%
Fully funded	16.5%

# 1980s

Senior dependency ratio	0.40
Annual increase in real wages	1.0%
Real rates of return	4.0%

<b>Funding Arrangement</b>	<b>Projected cost as Percentage of Payroll</b>
Pay-as-you-go (mature plan)	14.5%
Fully funded	7.2%

**Proposition 5: The fact that both the Canadian and U.S. social security systems were essentially started as pay-as-you-go systems was not a mistake. Further, just as a funded system may make more sense today, it is entirely possible that economic variables could shift and once again favour pay-as-you-go financing.**

**Proposition 6: A fully-funded social security system is not demographically immune. A fully-funded system is as dependent on the next generation of workers and their productivity as a pay-as-you-go system.**

Net Flow of Assets Into or Out of  
Pension and Retirement Savings  
1995 to 2065

Net Flow of Assets Into or Out of  
Pension and Retirement Savings  
1995 to 2065

**Proposition 7: For pre-funding to have any consequence on the security of social security, three requirements must be satisfied (all three); namely:**

- Pre-funding must increase gross national savings.**
- Those increased savings must be invested so as to increase worker productivity**
- Pre-funding must be the best way to achieve the first two requirements.**

# **Growth in Private Pension Assets Relative to Gross National Savings 1980-1991**

<b>Country</b>	<b>Gross saving</b>		<b>Pension Assets</b>		<b>Change 1991-1980</b>
	<b>(% of GDP) 1980</b>	<b>1988</b>	<b>(% of GDP) 1980</b>	<b>1991</b>	
<b>Canada</b>	<b>23.1</b>	<b>20.3</b>	<b>18.7</b>	<b>35.0</b>	<b>16.3</b>
<b>Denmark</b>	<b>20.3</b>	<b>15.0</b>	<b>26.3</b>	<b>60.0</b>	<b>33.7</b>
<b>France</b>	<b>25.4</b>	<b>19.8</b>	<b>1.0</b>	<b>3.0</b>	<b>2.0</b>
<b>Germany</b>	<b>23.7</b>	<b>22.2</b>	<b>2.6</b>	<b>4.0</b>	<b>1.4</b>
<b>Japan</b>	<b>34.4</b>	<b>31.2</b>	<b>3.2</b>	<b>8.0</b>	<b>4.8</b>
<b>Netherlands</b>	<b>23.9</b>	<b>22.3</b>	<b>46.0</b>	<b>76.0</b>	<b>30.0</b>
<b>Switzerland</b>	<b>28.0</b>	<b>28.4</b>	<b>51.0</b>	<b>70.0</b>	<b>19.0</b>
<b>U.K.</b>	<b>17.7</b>	<b>16.8</b>	<b>28.1</b>	<b>73.0</b>	<b>44.9</b>
<b>U.S.</b>	<b>19.5</b>	<b>16.1</b>	<b>40.7</b>	<b>66.0</b>	<b>25.3</b>

**Proposition 8: The best way to increase national savings is not to move to a fully-funded social security system. Rather it is to pay down the national debt.**

**Proposition 9: Macro-economically, there is very little difference between a pay-as-you-go social security system and a funded system where the assets are all government bonds.**

The background of the slide features a series of parallel diagonal stripes in two shades of blue, creating a sense of movement and depth. The stripes are oriented from the top-left towards the bottom-right.

# **SHIFT SOCIAL SECURITY TO A DEFINED CONTRIBUTION SCHEME**

## **Administrative Costs in Australian Individual Account Plans in 1997**

**Average  
Balance**

**Administrative Costs  
as Percent of Assets**

<b>\$ 1,000</b>	<b>14.82 %</b>
<b>\$ 5,000</b>	<b>2.96</b>
<b>\$10,000</b>	<b>1.48</b>
<b>\$20,000</b>	<b>0.74</b>
<b>\$30,000</b>	<b>0.49</b>

Variation in Benefits due to  
Market Variations in Stock Values  
(Assumes a 6% Contribution Rate)

Replacement rate

**Proposition 10: There is nothing in the history of any country's social security system or in the literature on social security that supports the contention that more funding of social security leads to either:**

- higher national savings rates, or**
- improved worker productivity**

**Thus, one cannot conclude that reform of social security to a more funded system is the best way to achieve these laudable goals.**

**Proposition 11: In short, proposed moves to higher levels of pre-funding of social security in both Canada and the U.S. require further public policy debate. Society should not rely on fuller funding of social security to solve the problems inherent in providing retirement income security to an aging population.**

**Proposition 12: The three ingredients that will provide security for social security are:**

- 1. A healthy and growing national economy.**
- 2. An efficient and accurate records administration system.**
- 3. An honest government.**

**These cannot be attained by changing the way you finance social security. In fact, the method of financing social security may be close to irrelevant to its future security.**
